This one day event is designed to provide health care practitioners in primary care role, the opportunity to discuss topics related to opioid agonist treatment, which can support and enhance the care they provide to patients with opioid use disorder.

It also allows practitioners to network with others in the field of treatment of opioid use disorders.

Learning objectives:

1. Comply with the CPSO MMT standards and guidelines to ensure patient safety and better treatment outcomes
2. Implement approach to address social determinants of health of people with opioid use disorder in clinical setting
3. Develop a process for rapid initiation of treatment for people with opioid use disorder
4. Develop treatment plan for management of hepatitis C in people with opioid use disorder
5. Develop a diagnostic approach that allows formulating a treatment plan to address opioid dependence and other co-morbidities
6. Adhere to opioid prescribing standards and guidelines using educational and quality improvement tools
